EDUCATION

DigiPen Institute of Technology | Redmond, WA | May 2030(Expected)
Keimyung University (KMU) | Daegu, South Korea | Jun 2026
- Completed 2.5 years of Computer Science coursework prior to transferring to DigiPen.

B.S. in Real-Time Interactive Simulation (RTIS) | GPA: 3.74
Relevant Courses: Data Structures & Algorithms, Object-Oriented Programming (C++), Operating Systems, Advanced C++, Linear Algebra, Motion Dynamics, Computer Graphics (OpenGL), Game Engine Architecture

TECHNICAL SKILLS

Programming Languages: C++, C, Python, GLSL
Engines & APIs: Custom C++ Game Engine (No. 99), OpenGL 4.6, Raylib, STL
Tools & Software: Git, CMake, Visual Studio 2022, RenderDoc
Interpersonal Skills: Collaborative Problem-Solving, Adaptable, Technical Communication, Solution-Oriented

WORK EXPERIENCE

ALAND | Sales Associate (Pop-up Store) | Seoul, South Korea | Dec/2025 - Mar/2026

- Provided high-quality customer service at a high-traffic pop-up store, serving a diverse international clientele.
- Facilitated seamless communication and sales in a fast-paced environment, leveraging English and Japanese to assist foreign customers.
- Managed inventory and maintained store aesthetics, ensuring brand alignment and a positive shopping experience for all visitors.

Roborobo | Coding Instructor (C++) | Seoul, South Korea | Dec/2021 - Nov/2022

- Instructed high school students in C++ programming, focusing on fundamental logic and robotic control systems.
- Mentored students on line-tracing algorithms, sensor control, and autonomous driving programming for robotics projects.
- Developed engaging lesson plans to bridge the gap between complex software concepts and real-world hardware applications.

PROJECTS

No. 99 | Technical Lead **Dec/2025 - Present**

- Developed a cross-platform 2D game engine from scratch using OpenGL and C++.
- A side-scrolling action platformer inspired by SANNABI and Hello, Seoul - Itaewon, featuring dynamic movement and fast-paced combat.
- Implemented a CMake pipeline to support multi-platform builds (Windows, Linux, macOS) and web platforms via WebGL.
- Integrated GitHub Actions for automated code management and CI/CD workflows.

Nano Clash | QA Engineer **Mar/2025 - Jun/2025**

- Developed a 2.5D survivor-style game using Raylib; improved rendering efficiency by 40% using back-face culling techniques.
- Monitored CPU/GPU utilization to optimize frame rates and identify critical performance bottlenecks.
- Debugged memory leaks and frame drops to ensure stable gameplay under heavy object-count scenarios.

One Day Santa | Technical Lead **Nov/2024 - Dec/2024**

- Led the technical direction and core programming for a wave-based tower defense game
- Designed advanced game features, including real-time map loading, utilizing 2D arrays for high-performance data management.

LEADERSHIP EXPERIENCE

DigiPen Institute of Technology | Tech Lead (Team JSLC) | Daegu, South Korea

- Technical Project Management: Directing the architecture, development, and cross-platform deployment (Native & WebGL) of custom 2D game engines for complex team-based projects.
- Team Collaboration & Mentorship: Facilitating code reviews, establishing technical guidelines, and ensuring seamless communication among diverse team members to optimize development workflows.
- Technical Initiative: Proactively identifying and resolving system bottlenecks (e.g., memory management, rendering efficiency) to improve overall product quality and stability.
